

Caroline Meyer Olesen, MD, PhD

Dr. Olesen completed her medical degree at University of Copenhagen and obtained her PhD degree at Department of Dermatology, Bispebjerg Hospital, where she is currently positioned as a postdoctoral researcher. She is principal investigator on a clinical study of chronic hand eczema aimed to elucidate subtype specific disease biomarkers. Her research is primarily focused on investigating molecular disease mechanisms of atopic dermatitis and chronic hand eczema using minimally invasive skin sample techniques and includes studies of the skin microbiome and expression of genes, proteins and lipids in these diseases.
